

**The Dynamic Tip**  
 Lake Erie's natural coastal processes of erosion and deposition, as well as storms and high winds, continually impact the sand spit landform which makes up the park. Shoreline alteration is constant and most noticeable at the Tip which can change drastically in shape and length. To ensure safe visitor experiences and to protect the fragile Tip area habitat, trails and footpaths are monitored and may be closed or rerouted.

# Birding Trail Map

## Map Legend

### Bicycle & Hiking Trail, seasonal

➤ 1.5 m wide, surfaced with crushed gravel and boardwalks

### Bicycle & Hike Trail, year-round

➤ 1.5 m wide, surfaced with crushed gravel and boardwalks

### Park Trails

➤ 1.5 m wide, surfaced with crushed gravel and boardwalks
